Richard

Born 1979

I am a versatile and passionate Senior Software Architect who is looking for new challenges where I get the opportunity to contribute, develop and grow in a positive community. A lifelong interest in computers makes it easy for me to learn new techniques and methods. Multicultural. I was born in Morocco, raised in France, educated in Germany and Sweden. Love Gothenburg

Experience

2019-Current: Sahlgrenska University Hospital System Developer / Business Developer

Responsible for system architecture backend and integrations with the entire Hospital system and architecture management system. The goal is to develop a new fresh backend system including the work set process for all the hospital. Most of the work consisted of architecture and Sync Output to various system integration.
Millennium Cerner certified as Architect and system developer plus GDPR certification.

2017–2019: Annevo AB Sweden Solution Architect and Project leader

With other consulting developers responsible for Architecture against NA-KD, VOLVO,

SKF systems.

Richard is a project Worked for 8 months on each assignment:

- **Volvo**: **DevOps Architect CI / CD from external supplier to endpoint 'CAR'**.
- **SKF**: **Lösning Architect Built an analysis system that listens to different sensors.**
- **NAKD**: **Lösning Architect Entire E-Commerce system "Episerver" NAKD.com.**

2015–2017:   West University System Developer / System Architect & Project Leader

With six other developers responsible for backend and frontend as well as integrations with the entire

University West management system. The goal is to develop a modern system "New look" adapted to all new

Technology (tablet, mobile,… ..).

Richard is a versatile and passionate front end developer looking for new challenges with structured modern

methods.

2014 –2015: Ericsson AB Sweden   System Developer \ Mobile Developer

Together with five other developers, I have been responsible for backend and frontend as well as integrations with Ericsson's product management system. The goal is to develop and manage the entire Ericsson "nodes" data product display into a full-scale portal.

Richard developed an internal mobile portal that displayed logs and test results for different nodes' products. Most of the work consisted of back-end and front-end development programming which resulted in a user-friendly and graphically clean internal mobile portal.

2013–2014:   Resource Point AB Sweden   Mobile developers

At Resources Point, I work as an iOS / Android developer on an exciting customer project on behalf of the company SoToSpeak AB. The application manages and supports an operating system, for language learning. www.sotospeak.se for more information. The system handles the pedagogical part and specifically the flow of communication.

2008–2013: Mediaplazza – Jet Multimedia Group   Solution Architect / System Developer -Remote-

Mediaplazza - Jet Multimedia is a medium-sized web digital company focusing on e-commerce solutions for B2C as well as B2B. Worked here before I started studying and extra during my studies. Below is a selection of projects.

• Development of web-based tool where customers could review and send content to Mediaplazza's server.

• Development of a web-based tool for internal management of support matters. Communication between SMS provider and Mediaplazza server gateway.

2007–2008: Vox link solutions, Germany   System developer

Vox link is a provider of "next generation business collaboration" and communication solutions. Vox link works with unified communications, real-time videos, contact centers, networks and related services for companies of all sizes worldwide. My role was to expand and maintain parts within multi-channel technology, the call center part where solutions within Click2Call, click2chat and click2video were also included.

• Managed SQL Server 2005 & Exchange 2007, and over 300 Active Directory user accounts.

• Managed and updated workstation and laptops.

• Supported and maintained servers and backups.

2003–2007: Mediaplazza – Jet Multimedia Group, Germany   System developer
Mediaplazza - Jet Multimedia is a medium-sized web digital company focusing on e-commerce solutions for B2C as well as B2B. Worked here before I started studying and extra during my studies. Below is a selection of projects. Development of web-based tool where customers could review and send content to Mediaplazza's server.

Development of web-based tool for internal management of support matters. Communication between SMS provider and Mediaplazza server gateway.
